Summary

Software Engineering student with hands-on experience in frontend development using TypeScript/React, Python backend services, and cloud containerization with Docker. Proven ability to develop interactive dashboards, optimize complex algorithms, and collaborate in team environments to deliver scalable software solutions. Available for a 4 month internship starting from May 2027.

Work Experience

CGI Inc. **Toronto, ON**
AI developer *Sep 2026 – Apr 2027*

- Incoming CGI AI developer intern

Canada Revenue Agency (CRA) **Ottawa**
Data & AI Analyst *May 2026 – Present*

- Identify opportunities for AI-enabled analysis and process improvement by researching CRA programs, business workflows and operational requirements.
- Improved data reliability for compliance and audit risk analysis by developing automated workflows in Python, SQL, and R to clean, merge, and validate multi-source internal datasets across 30+ records.
- Translate business needs into practical analytical approaches by collaborating with program teams, analysts, subject matter experts and data specialists in a security and compliance focused environment.
- Accelerated stakeholder reporting by 30+ hours per reporting cycle by producing KPI summaries, year-over-year comparisons, and interactive visualisation across 14,000+ cases over 8 years.

ATJ Consulting Inc. **Toronto, ON (Remote)**
Full Stack Developer *Feb 2026 – Present*

- Architected and developed Happyhourinmycity.com from the ground up using Next.js, TypeScript and shadcn/ui, translating product requirements into a responsive restaurant discovery platform with more than 400+ restaurants and 500 visitors a month.
- Designed integrations involving Google APIs, secure authentication and Stripe payments to automate workflows and support personalized user experiences.
- Expanded cross platform accessibility by converting the application into an installable Progressive Web App and preparing the codebase for Vercel deployment and future Capacitor based mobile distribution.

Education

Carleton University **Ottawa, ON**
Bachelor of Software Engineering (Co-op) *Sep 2023 – Apr 2028*

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Software Design, Databases.

Technical Skills

Languages: TypeScript, Python (TensorFlow, PyTorch, Pandas), Java, C/C++, SQL (PostgreSQL), MATLAB, Kotlin
Software & Systems: Docker, Git, Linux (Bash/Shell), CI/CD Basics, ROS2, Android Studio, VirtualBox
AI & Frameworks: React, Node.js, Computer Vision (OpenCV), Neural Networks (CNN), MongoDB, Streamlit
Methodologies: Unit Testing, Test-Driven Development (TDD), Agile/Scrum, SDLC

Projects

Brain Tumor Detection AI Model (Computer Vision) | *Python, TensorFlow, Keras, OpenCV*

- Achieved 94% classification accuracy by training a Convolutional Neural Network (CNN) on MRI scan datasets, optimizing complex algorithms for diagnostic precision with large datasets.
- Developed a data preprocessing pipeline using OpenCV, reducing input noise and increasing model robustness across multiple sources through scalable component-based architecture.
- Improved model interpretability by 30% by implementing visualization techniques to validate AI decision-making processes, enhancing data visualization capabilities.
